Polyclonal Anti-Actin (Sepharose Bead Conjugate)

**Catalogue No.** PA1324-S  
**Lot No.** 0131012022464  
**Ig type:** rabbit IgG  
**Size:** 100μg/vial  
**Specificity**  
Human, rat. No cross reactivity with other proteins.  

**Recommended application**  
*(Immunoprecipitation*(IP)*

**Immunogen**  
A synthetic peptide corresponding to a sequence at the C-terminal of human Actin (367-377aa), identical to the related rat sequence.

**Purification**  
Immunogen affinity purified.

**Formulation**  
50% slurry in PBS pH 7.2 with 0.01mg NaN₃ preservative.

**Storage**  
Store at 4°C for frequent use.

**Description:**  
This Antagene antibody is immobilized via covalent binding of primary amino groups to N-hydroxysuccinimide (NHS)-activated sepharose beads. It is useful for immunoprecipitation assays.

**BACKGROUND**  
Actin, a highly conserved protein, is a major component of both the cytoskeletal and contractile structures in the cell types. It varies in amount, being related to the type of differentiation and to the functional state of cells and tissues. The actins exhibit over 90% sequence homology, but each isoform has a unique NH2-terminal sequence. The isoforms are comprised of three alpha-actin, one beta-actin, two gamma-actin. Because the amino acid sequence of the C-terminal is the same for almost all actins, this antibody has been raised using a synthetic peptide corresponding to the C-terminal 11 residues.
